Experiment # 1
Installation Of Ubuntu

Objective
Perform Lab Task Of Operating System Lab.

Software Tool
1. Ruffus
2. USB
3. Ubuntu ISO Image

1   Theory

To install Ubuntu in laptops was labtask for the Operating System lab. I downloaded ISO Image of Ubuntu and made my USB a bootable device for it using a tool; Rufus. Rufus is a simple tool to make USB's bootable for ISO Images. I have 2 laptops so I installed Ubuntu OS on the spare one to use for the Operating System lab only. Installation was simple as I don't have to make any partitions. Installation was successful.
